1 Syntax and Semantics

1.1 Abstract Syntax

Identifiers	x	$\in$	Var	
Expression	e	$\rightarrow$	$x \mid \lambda x.e \mid e\,e$	λ-calculus
		$\mid$	$e \bowtie e$	linked expression
		$\mid$	ε	empty module
		$\mid$	$x = e\,;\,e$	(recursive) binding

Figure 1: Abstract syntax of the language.

1.2 Operational Semantics

Environment	σ	$\in$	Env	
Location	ℓ	$\in$	Loc	
Value	v	$\in$	$\text{Val} \triangleq \text{Env} + \text{Var} \times \text{Expr} \times \text{Env}$	
Weak Value	w	$\in$	$\text{WVal} \triangleq \text{Val} + \underline{\text{Val}}$	
Environment	σ	$\rightarrow$	$\bullet$	empty stack
		$\mid$	$(x, w) :: \sigma$	weak value binding
		$\mid$	$(x, \ell) :: \sigma$	free location binding
Value	v	$\rightarrow$	σ	exported environment
		$\mid$	$\langle \lambda x.e, \sigma \rangle$	closure
Weak Value	w	$\rightarrow$	v	value
		$\mid$	$\mu\ell.v$	recursive value

Figure 2: Definition of the semantic domains.

$$\boxed{\sigma \vdash e \Downarrow v}$$

$$\text{ID} \quad \frac{\sigma(x) = v}{\sigma \vdash x \Downarrow v}$$

$$\text{RecId} \quad \frac{\sigma(x) = \mu\ell.v}{\sigma \vdash x \Downarrow v[\mu\ell.v/\ell]}$$

$$\text{Fn} \quad \frac{}{\sigma \vdash \lambda x.e \Downarrow \langle \lambda x.e, \sigma \rangle}$$

$$\text{App} \quad \frac{\sigma \vdash e_1 \Downarrow \langle \lambda x.e, \sigma_1 \rangle \quad \sigma \vdash e_2 \Downarrow v_2 \quad (x, v_2) :: \sigma_1 \vdash e \Downarrow v}{\sigma \vdash e_1\,e_2 \Downarrow v}$$

$$\text{Link} \quad \frac{\sigma \vdash e_1 \Downarrow \sigma_1 \quad \sigma_1 \vdash e_2 \Downarrow v}{\sigma \vdash e_1 \bowtie e_2 \Downarrow v}$$

$$\text{Empty} \quad \frac{}{\sigma \vdash \varepsilon \Downarrow \bullet}$$

$$\text{Bind} \quad \frac{\ell \notin \text{FLoc}(\sigma) \quad (x, \ell) :: \sigma \vdash e_1 \Downarrow v_1 \quad (x, \mu\ell.v_1) :: \sigma \vdash e_1 \Downarrow \sigma_2}{\sigma \vdash x = e_1; e_2 \Downarrow (x, \mu\ell.v_1) :: \sigma_2}$$

Figure 3: The big-step operational semantics.

The big-step operational semantics is *deterministic* up to α-equivalence.

$$\begin{array}{llll}
\text{Environment} & \sigma & \in & \text{MEnv} \triangleq \text{Var} \xrightarrow{\text{fin}} \text{Loc} \\
\text{Memory} & m & \in & \text{Mem} \triangleq \text{Loc} \xrightarrow{\text{fin}} \text{MVal} \\
\text{Allocated set} & L & \subseteq & \text{Loc} \\
\text{Value} & v & \in & \text{MVal} \triangleq \text{MEnv} + \text{Var} \times \text{Expr} \times \text{MEnv} \\
\text{Environment} & \sigma & \rightarrow & \bullet & \text{empty stack} \\
& & | & (x, \ell) :: \sigma & \text{location binding} \\
\text{Value} & v & \rightarrow & \sigma & \text{exported environment} \\
& & | & \langle \lambda x.e, \sigma \rangle & \text{closure}
\end{array}$$

Figure 4: Definition of the semantic domains with memory.

$$\boxed{\sigma, m, L \vdash e \Downarrow v, m', L'}$$

$$\text{ID} \quad \frac{\sigma(x) = \ell \qquad m(\ell) = v}{\sigma, m, L \vdash x \Downarrow v, m, L} \qquad \text{FN} \quad \frac{}{\sigma, m, L \vdash \lambda x.e \Downarrow \langle \lambda x.e, \sigma \rangle, m, L}$$

$$\text{APP} \quad \frac{\sigma, m, L \vdash e_1 \Downarrow \langle \lambda x.e, \sigma_1 \rangle, m_1, L_1 \qquad \sigma, m_1, L_1 \vdash e_2 \Downarrow v_2, m_2, L_2 \qquad \ell \notin \text{dom}(m_2) \cup L_2}{\sigma, m, L \vdash e_1 \, e_2 \Downarrow v, m', L'}$$
$$\frac{(x, \ell) :: \sigma_1, m_2[\ell \mapsto v_2], L_2 \vdash e \Downarrow v, m', L'}{}$$

$$\text{LINK} \quad \frac{\sigma, m, L \vdash e_1 \Downarrow \sigma_1, m_1, L_1 \qquad \sigma_1, m_1, L_1 \vdash e_2 \Downarrow v, m', L'}{\sigma, m, L \vdash e_1 \rtimes e_2 \Downarrow v, m', L'} \qquad \text{EMPTY} \quad \frac{}{\sigma, m, L \vdash \varepsilon \Downarrow \bullet, m, L}$$

$$\text{BIND} \quad \frac{\ell \notin \text{dom}(m) \cup L \qquad (x, \ell) :: \sigma, m, L \cup \{\ell\} \vdash e_1 \Downarrow v_1, m_1, L_1}{(x, \ell) :: \sigma, m_1[\ell \mapsto v_1], L_1 \vdash e_2 \Downarrow \sigma_2, m', L'}$$
$$\frac{}{\sigma, m, L \vdash x = e_1; e_2 \Downarrow (x, \ell) :: \sigma_2, m', L'}$$

Figure 5: The big-step operational semantics with memory.

$$\boxed{w \sim_f v, m}$$

$$\text{EQ-NIL} \quad \frac{}{\bullet \sim_f \bullet} \qquad \text{EQ-CONSFREE} \quad \frac{\ell \notin \text{dom}(f) \qquad \ell \notin \text{dom}(m) \qquad \sigma \sim_f \sigma'}{(x, \ell) :: \sigma \sim_f (x, \ell) :: \sigma'} \qquad \text{EQ-CONSBOUND} \quad \frac{f(\ell) = \ell' \qquad \ell' \in \text{dom}(m) \qquad \sigma \sim_f \sigma'}{(x, \ell) :: \sigma \sim_f (x, \ell') :: \sigma'}$$

$$\text{EQ-CONSWVAL} \quad \frac{m(\ell') = v' \qquad w \sim_f v' \qquad \sigma \sim_f \sigma'}{(x, w) :: \sigma \sim_f (x, \ell') :: \sigma'} \qquad \text{EQ-CLOS} \quad \frac{\sigma \sim_f \sigma'}{\langle \lambda x.e, \sigma \rangle \sim_f \langle \lambda x.e, \sigma' \rangle} \qquad \text{EQ-REC} \quad \frac{L \text{ finite} \qquad m(\ell') = v' \qquad \forall \nu \notin L, \, v[\nu/\ell] \sim_{f[\nu \mapsto \ell']} v'}{\mu \ell.v \sim_f v'}$$

Figure 6: The equivalence relation between weak values in the original semantics and values in the semantics with memory. $f \in \text{Loc} \xrightarrow{\text{fin}} \text{Loc}$ tells what the free locations in w that were *opened* should be mapped to in memory. m is omitted for brevity.

1.3 Reconciling with Conventional Backpatching

The semantics in Figure 3 makes sense due to similarity with a conventional backpatching semantics as presented in Figure 5. We have defined a relation $\sim$ that satisfies:

$$\sim \subseteq \text{WVal} \times (\text{MVal} \times \text{Mem} \times \mathcal{P}(\text{Loc})) \qquad \bullet \sim (\bullet, \emptyset, \emptyset)$$

The following theorem holds:

Theorem 1.1 (Equivalence of semantics). For all $\sigma \in \text{Env}, \sigma' \in \text{MEnv} \times \text{Mem} \times \mathcal{P}(\text{Loc}), v \in \text{Val}, v' \in \text{MVal} \times \text{Mem} \times \mathcal{P}(\text{Loc})$, we have:

$$\sigma \sim \sigma' \text{ and } \sigma \vdash e \Downarrow v \Rightarrow \exists v' : v \sim v' \text{ and } \sigma' \vdash e \Downarrow v'$$
$$\sigma \sim \sigma' \text{ and } \sigma' \vdash e \Downarrow v' \Rightarrow \exists v : v \sim v' \text{ and } \sigma \vdash e \Downarrow v$$

The definition for $w \sim (\sigma, m, L)$ is:

$$w \sim_\perp (\sigma, m) \text{ and } \text{FLoc}(w) \subseteq L$$

where the definition for $\sim_f$ is given in Figure 6.

The proof of Theorem 1.1 uses some useful lemmas, such as:

Lemma 1.1 (Free locations not in f are free in memory).

$$w \sim_f v', m \Rightarrow m|_{\text{FLoc}(w)-\text{dom}(f)} = \perp$$

Lemma 1.2 (Equivalence is preserved by extension of memory).

$$w \sim_f v', m \text{ and } m \sqsubseteq m' \text{ and } m'|_{\text{FLoc}(w)-\text{dom}(f)} = \perp \Rightarrow w \sim_f v', m$$

Lemma 1.3 (Equivalence only cares about f on free locations).

$$w \sim_f v', m \text{ and } f|_{\text{FLoc}(w)} = f|_{\text{FLoc}(w)} \Rightarrow w \sim_{f'} v', m$$

Lemma 1.4 (Extending equivalence on free locations).

$$w \sim_f v', m \text{ and } \ell \notin \text{dom}(f) \text{ and } \ell \notin \text{dom}(m) \Rightarrow \forall u', w \sim_{f[\ell \mapsto \ell]} v', m[\ell \mapsto u']$$

Lemma 1.5 (Substitution of values).

$$w \sim_f v', m \text{ and } f(\ell) = \ell' \text{ and } m(\ell') = u' \text{ and } u \sim_{f-\ell} u', m \Rightarrow w[u/\ell] \sim_{f-\ell} v', m$$

Lemma 1.6 (Substitution of locations).

$$w \sim_f v', m \text{ and } \ell \in \text{dom}(f) \text{ and } \nu \notin \text{FLoc}(w) \Rightarrow w[\nu/\ell] \sim_{f \circ (\nu \leftrightarrow \ell)} v', m$$

3

2 Generating and Resolving Events

Now we formulate the semantics for generating events.

$$
\begin{array}{rrcll}
\text{Event} & E & \to & \mathsf{Init} & \text{initial environment} \\
& & | & \mathsf{Read}(E,x) & \text{read event} \\
& & | & \mathsf{Call}(E,v) & \text{call event} \\
\text{Environment} & \sigma & \to & \cdots & \\
& & | & [E] & \text{answer to an event} \\
\text{Value} & v & \to & \cdots & \\
& & | & E & \text{answer to an event}
\end{array}
$$

Figure 7: Definition of the semantic domains with events. All other semantic domains are equal to Figure 2.

We extend how to read weak values given an environment.

$$
\begin{aligned}
\bullet(x) &\triangleq \bot & ((x',\ell) :: \sigma)(x) &\triangleq (x = x'?\ell : \sigma(x)) \\
[E](x) &\triangleq \mathsf{Read}(E,x) & ((x',w) :: \sigma)(x) &\triangleq (x = x'?w : \sigma(x))
\end{aligned}
$$

Then we need to add only one rule to the semantics in Figure 3 for the semantics to incorporate events.

$$
\frac{\textsc{AppEvent} \\ \sigma \vdash e_1 \Downarrow E \qquad \sigma \vdash e_2 \Downarrow v}{\sigma \vdash e_1\, e_2 \Downarrow \mathsf{Call}(E,v)}
$$

Now we need to formulate the *concrete linking* rules. The concrete linking rule $\sigma_0 \varpropto w$, given an answer σ_0 to the Init event, resolves all events within w to obtain a set of final results.

$$\boxed{\varpropto \in \mathrm{Env} \to \mathrm{Event} \to \mathcal{P}(\mathrm{Val})}$$

$$
\begin{aligned}
\sigma_0 \varpropto \mathsf{Init} &\triangleq \{\sigma_0\} \\
\sigma_0 \varpropto \mathsf{Read}(E,x) &\triangleq \{v_+ | \sigma_+ \in \sigma_0 \varpropto E \wedge \sigma_+(x) = v_+\} \\
&\quad \cup \{v_+[\mu\ell.v_+/\ell] | \sigma_+ \in \sigma_0 \varpropto E \wedge \sigma_+(x) = \mu\ell.v_+\} \\
\sigma_0 \varpropto \mathsf{Call}(E,v) &\triangleq \{v'_+ | \langle \lambda x.e, \sigma_+\rangle \in \sigma_0 \varpropto E \wedge v_+ \in \sigma_0 \varpropto v \wedge (x,v_+) :: \sigma_+ \vdash e \Downarrow v'_+\} \\
&\quad \cup \{\mathsf{Call}(E_+,v_+) | E_+ \in \sigma_0 \varpropto E \wedge v_+ \in \sigma_0 \varpropto v\}
\end{aligned}
$$

$$\boxed{\varpropto \in \mathrm{Env} \to \mathrm{Env} \to \mathcal{P}(\mathrm{Env})}$$

$$
\begin{aligned}
\sigma_0 \varpropto \bullet &\triangleq \{\bullet\} \\
\sigma_0 \varpropto (x,\ell) :: \sigma &\triangleq \{(x,\ell) :: \sigma_+ | \sigma_+ \in \sigma_0 \varpropto \sigma\} \\
\sigma_0 \varpropto (x,w) :: \sigma &\triangleq \{(x,w_+) :: \sigma_+ | w_+ \in \sigma_0 \varpropto w \wedge \sigma_+ \in \sigma_0 \varpropto \sigma\} \\
\sigma_0 \varpropto [E] &\triangleq \{\sigma_+ | \sigma_+ \in \sigma_0 \varpropto E\} \cup \{[E_+] | E_+ \in \sigma_0 \varpropto E\}
\end{aligned}
$$

$$\boxed{\varpropto \in \mathrm{Env} \to \mathrm{Val} \to \mathcal{P}(\mathrm{Val})}$$

$$
\sigma_0 \varpropto \langle \lambda x.e, \sigma\rangle \triangleq \{\langle \lambda x.e, \sigma_+\rangle | \sigma_+ \in \sigma_0 \varpropto \sigma\}
$$

$$\boxed{\varpropto \in \mathrm{Env} \to \mathrm{WVal} \to \mathcal{P}(\mathrm{WVal})}$$

$$
\sigma_0 \varpropto \mu\ell.v \triangleq \{\mu\ell'.v_+ | \ell' \notin \mathrm{FLoc}(v) \cup \mathrm{FLoc}(\sigma_0) \wedge v_+ \in \sigma_0 \varpropto v[\ell'/\ell]\}
$$

Concrete linking makes sense because of the following theorem. First define:

$$
\mathrm{eval}(e,\sigma) \triangleq \{v | \sigma \vdash e \Downarrow v\} \qquad \mathrm{eval}(e,\Sigma) \triangleq \bigcup_{\sigma \in \Sigma} \mathrm{eval}(e,\sigma) \qquad \Sigma_0 \varpropto W \triangleq \bigcup_{\substack{\sigma_0 \in \Sigma_0 \\ w \in W}} (\sigma_0 \varpropto w)
$$

Then the following holds:

Theorem 2.1 (Advance)**.** Given $e \in \mathrm{Expr}, \Sigma_0, \Sigma \subseteq \mathrm{Env}$,

$$
\mathrm{eval}(e, \Sigma_0 \varpropto \Sigma) \subseteq \Sigma_0 \varpropto \mathrm{eval}(e, \Sigma)
$$

The proof of Theorem 2.1 uses some useful lemmas, such as:

Lemma 2.1 (Linking distributes under substitution). Let σ_0 be the external environment that is linked with weak values w and u. For all $\ell \notin \mathrm{FLoc}(\sigma_0)$, we have:

$$\forall w_+, u_+ : w_+ \in \sigma_0 \rtimes w \wedge u_+ \in \sigma_0 \rtimes u \Rightarrow w_+[u_+/\ell] \in \sigma_0 \rtimes w[u/\ell]$$

Lemma 2.2 (Linking is compatible with reads). Let σ_0 be the external environment that is linked with some environment σ. Let w be the value obtained from reading x from σ. Let $\mathrm{unfold} : \mathrm{WVal} \to \mathrm{Val}$ be defined as:

$$\mathrm{unfold}(\mu\ell.v) \triangleq v[\mu\ell.v/\ell] \qquad \mathrm{unfold}(v) \triangleq v$$

Then for all $\sigma_+ \in \sigma_0 \rtimes \sigma$, we have:

$$\exists w_+ \in \mathrm{WVal} : \sigma_+(x) = w_+ \wedge \mathrm{unfold}(w_+) \in \sigma_0 \rtimes \mathrm{unfold}(w)$$

Now we can formulate modular analysis. A modular analysis consists of two requirements: an abstraction for the semantics with events and an abstraction for the semantic linking operator.

Theorem 2.2 (Modular analysis). Assume:

1. An abstract domain $\mathrm{WVal}^\#$ that is concretized by a monotonic $\gamma \in \mathscr{P}(\mathrm{WVal}) \to \mathrm{WVal}^\#$

2. A sound $\mathrm{eval}^\#$: $\Sigma_0 \subseteq \gamma(\sigma_0^\#) \Rightarrow \mathrm{eval}(e, \Sigma_0) \subseteq \gamma(\mathrm{eval}^\#(e, \sigma_0^\#))$

3. A sound $\rtimes^\#$: $\Sigma_0 \subseteq \gamma(\sigma_0^\#)$ and $W \subseteq \gamma(w^\#) \Rightarrow \Sigma_0 \rtimes W \subseteq \gamma(\sigma_0^\# \rtimes^\# w^\#)$

then we have:
$$\Sigma_0 \subseteq \gamma(\sigma_0^\#) \text{ and } \Sigma \subseteq \gamma(\sigma^\#) \Rightarrow \mathrm{eval}(e, \Sigma_0 \rtimes \Sigma) \subseteq \gamma(\sigma_0^\# \rtimes^\# \mathrm{eval}^\#(e, \sigma^\#))$$

Corollary 2.1 (Modular analysis of linked program).

$$\Sigma_0 \subseteq \gamma(\sigma_0^\#) \text{ and } [\mathsf{Init}] \in \gamma(\mathsf{Init}^\#) \Rightarrow \mathrm{eval}(e_1 \rtimes e_2, \Sigma_0) \subseteq \gamma(\mathrm{eval}^\#(e_1, \sigma_0^\#) \rtimes^\# \mathrm{eval}^\#(e_2, \mathsf{Init}^\#))$$

3 CFA

3.1 Collecting semantics

$$
\begin{array}{rcll}
\text{Program point} & p & \in & \mathbb{P} \triangleq \{\text{finite set of program points}\} \\
\text{Labelled expression} & pe & \in & \mathbb{P} \times \text{Expr} \\
\text{Labelled location} & \ell^p & \in & \mathbb{P} \times \text{Loc} \\
\text{Collecting semantics} & t & \in & \mathbb{T} \triangleq \mathbb{P} \to \mathscr{P}(\text{Env} + \text{Env} \times \text{Val}) \\
\text{Labelled expression} & pe & \to & \{p : e\} \\
\text{Expression} & e & \to & x \mid \lambda x.pe \mid pe\ pe \mid pe \rtimes pe \mid \varepsilon \mid x = pe; pe
\end{array}
$$

$$\boxed{\text{Step} : \mathbb{T} \to \mathbb{T}}$$

$$\text{Step}(t) \triangleq \bigcup_{p \in \mathbb{P}} \text{step}(t, p)$$

$$\boxed{\text{step} : (\mathbb{T} \times \mathbb{P}) \to \mathbb{T}}$$

$$
\begin{aligned}
\text{step}(t, p) &\triangleq [p \mapsto \{(\sigma, v) \mid \sigma \in t(p) \text{ and } \sigma(x) = v\}] && \text{when } \{p : x\} \\
&\cup [p \mapsto \{(\sigma, v[\mu\ell^{p'}.v/\ell^{p'}]) \mid \sigma \in t(p) \text{ and } \sigma(x) = \mu\ell^{p'}.v\}] \\
\text{step}(t, p) &\triangleq [p \mapsto \{(\sigma, \langle \lambda x.p', \sigma \rangle) \mid \sigma \in t(p)\}] && \text{when } \{p : \lambda x.p'\} \\
\text{step}(t, p) &\triangleq [p_1 \mapsto \{\sigma \in \text{Env} \mid \sigma \in t(p)\}] && \text{when } \{p : p_1\, p_2\} \\
&\cup [p_2 \mapsto \{\sigma \in \text{Env} \mid \sigma \in t(p)\}] \\
&\cup \bigcup_{\sigma \in t(p)} \bigcup_{(\sigma, \langle \lambda x.p', \sigma_1 \rangle) \in t(p_1)} [p' \mapsto \{(x, v_2) :: \sigma_1 \mid (\sigma, v_2) \in t(p_2)\}] \\
&\cup [p \mapsto \bigcup_{\sigma \in t(p)} \bigcup_{(\sigma, \langle \lambda x.p', \sigma_1 \rangle) \in t(p_1)} \bigcup_{(\sigma, v_2) \in t(p_2)} \{(\sigma, v) \mid ((x, v_2) :: \sigma_1, v) \in t(p')\}] \\
&\cup [p \mapsto \bigcup_{\sigma \in t(p)} \{(\sigma, \mathsf{Call}(E_1, v_2)) \mid (\sigma, E_1) \in t(p_1) \text{ and } (\sigma, v_2) \in t(p_2)\}] \\
\text{step}(t, p) &\triangleq [p_1 \mapsto \{\sigma \mid \sigma \in t(p)\}] && \text{when } \{p : p_1 \rtimes p_2\} \\
&\cup [p_2 \mapsto \bigcup_{\sigma \in t(p)} \{\sigma_1 \mid (\sigma, \sigma_1) \in t(p_1)\}] \\
&\cup [p \mapsto \bigcup_{\sigma \in t(p)} \bigcup_{(\sigma, \sigma_1) \in t(p_1)} \{(\sigma, v_2) \mid (\sigma_1, v_2) \in t(p_2)\}] \\
\text{step}(t, p) &\triangleq [p \mapsto \{(\sigma, \bullet) \mid \sigma \in t(p)\}] && \text{when } \{p : \varepsilon\} \\
\text{step}(t, p) &\triangleq [p_1 \mapsto \bigcup_{\sigma \in t(p)} \{(x, \ell^{p_1}) :: \sigma \mid \ell \notin \text{FLoc}(\sigma)\}] && \text{when } \{p : x = p_1; p_2\} \\
&\cup [p_2 \mapsto \bigcup_{\sigma \in t(p)} \{(x, \mu\ell^{p_1}.v_1) :: \sigma \mid ((x, \ell^{p_1}) :: \sigma, v_1) \in t(p_1)\}] \\
&\cup [p \mapsto \bigcup_{\sigma \in t(p)} \bigcup_{((x, \ell^{p_1}) :: \sigma, v_1) \in t(p_1)} \{(\sigma, (x, \mu\ell^{p_1}.v_1) :: \sigma_2) \mid ((x, \mu\ell^{p_1}.v_1) :: \sigma, \sigma_2) \in t(p_2)\}]
\end{aligned}
$$

The collecting semantics $[\![p_0]\!]\Sigma_0$ computed by

$$[\![p_0]\!]\Sigma_0 \triangleq \text{lfp}(\lambda t.\text{Step}(t) \cup t_{\text{init}}) \quad \text{where } t_{\text{init}} = [p_0 \mapsto \Sigma_0]$$

contains all derivations of the form $\sigma_0 \vdash p_0 \Downarrow v_0$ for some $\sigma_0 \in \Sigma_0$ and v_0. That is, (σ, v) is contained in $[\![p_0]\!]\Sigma_0(p)$ if and only if $\sigma \vdash p \Downarrow v$ is contained in some derivation for the judgment $\sigma_0 \vdash p_0 \Downarrow v_0$.

3.2 Abstract semantics

$$
\begin{array}{rcll}
\text{Abstract event} & E^{\#} & \in & \text{Event}^{\#} \\
\text{Abstract environment} & \sigma^{\#} & \in & \text{Env}^{\#} \triangleq (\text{Var} \xrightarrow{\text{fin}} \mathscr{P}(\mathbb{P})) \times \mathscr{P}(\text{Event}^{\#}) \\
\text{Abstract closure} & \langle \lambda x.p, p' \rangle & \in & \text{Clos}^{\#} \triangleq \text{Var} \times \mathbb{P} \times \mathbb{P} \\
\text{Abstract value} & v^{\#} & \in & \text{Val}^{\#} \triangleq \text{Env}^{\#} \times \mathscr{P}(\text{Clos}^{\#}) \\
\text{Abstract semantics} & t^{\#} & \in & \mathbb{T}^{\#} \triangleq \mathbb{P} \to \text{Env}^{\#} \times \text{Val}^{\#} \\
\text{Abstract event} & E^{\#} & \to & \mathsf{Init}^{\#} \mid \mathsf{Read}^{\#}(p, x) \mid \mathsf{Call}^{\#}(p, p)
\end{array}
$$

$$\boxed{\sigma \leq (\sigma^{\#}, t^{\#})}$$

$$
\frac{}{\bullet \leq \sigma^{\#}}\ \textsc{Conc-Nil}
\qquad
\frac{E \leq (\sigma^{\#}, \emptyset)}{[E] \leq \sigma^{\#}}\ \textsc{Conc-ENil}
\qquad
\frac{p \in \sigma^{\#}.1(x) \qquad \sigma \leq \sigma^{\#}}{(x, \ell^{p}) :: \sigma \leq \sigma^{\#}}\ \textsc{Conc-ConsLoc}
\qquad
\frac{p \in \sigma^{\#}.1(x) \qquad w \leq t^{\#}(p).2 \qquad \sigma \leq \sigma^{\#}}{(x, w) :: \sigma \leq \sigma^{\#}}\ \textsc{Conc-ConsWVal}
$$

$$\boxed{w \leq (v^{\#}, t^{\#})}$$

$$
\frac{\langle \lambda x.p, p' \rangle \in v^{\#}.2 \qquad \sigma \leq t^{\#}(p').1}{\langle \lambda x.p, \sigma \rangle \leq v^{\#}}\ \textsc{Conc-Clos}
\qquad
\frac{v \leq t^{\#}(p).2 \qquad v \leq v^{\#}}{\mu \ell^{p}.v \leq v^{\#}}\ \textsc{Conc-Rec}
$$

$$
\frac{\mathsf{Init}^{\#} \in v^{\#}.1.2}{\mathsf{Init} \leq v^{\#}}\ \textsc{Conc-Init}
\qquad
\frac{\mathsf{Read}^{\#}(p, x) \in v^{\#}.1.2 \qquad [E] \leq t^{\#}(p).1}{\mathsf{Read}(E, x) \leq v^{\#}}\ \textsc{Conc-Read}
\qquad
\frac{\mathsf{Call}^{\#}(p_1, p_2) \in v^{\#}.1.2 \qquad E \leq t^{\#}(p_1).2 \qquad v \leq t^{\#}(p_2).2}{\mathsf{Call}(E, v) \leq v^{\#}}\ \textsc{Conc-Call}
$$

Figure 8: The concretization relation between weak values and abstract values. $t^{\#}$ is omitted.

The concretization function γ that sends an element of $\mathbb{T}^{\#}$ to $\mathbb{T}$ is defined as:

$$\gamma(t^{\#}) \triangleq \lambda p.\{\sigma | \sigma \leq (t^{\#}(p).1, t^{\#})\} \cup \{(\sigma, v) | v \leq (t^{\#}(p).2, t^{\#})\}$$

where $\leq$ is the concretization relation that is inductively defined in Figure 8.

Now the abstract semantic function can be given.

$$\boxed{\mathrm{Step}^{\#} : \mathbb{T}^{\#} \to \mathbb{T}^{\#}}$$

$$\mathrm{Step}^{\#}(t^{\#}) \triangleq \bigsqcup_{p \in \mathbb{P}} \mathrm{step}^{\#}(t^{\#}, p)$$

$$\boxed{\mathrm{step}^{\#} : (\mathbb{T}^{\#} \times \mathbb{P}) \to \mathbb{T}^{\#}}$$

$$
\begin{aligned}
\mathrm{step}^{\#}(t^{\#}, p) \triangleq\ & [p \mapsto \bigsqcup_{p' \in t^{\#}(p).1.1(x)} (\bot, t^{\#}(p').2)] && \text{when } \{p : x\} \\
\sqcup\ & [p \mapsto (\bot, (([], \{\mathsf{Read}^{\#}(p, x)\}), \emptyset))] && \text{if } t^{\#}(p).1.2 \neq \emptyset \\
\mathrm{step}^{\#}(t^{\#}, p) \triangleq\ & [p \mapsto (\bot, (\bot, \{\langle \lambda x.p', p \rangle\}))] && \text{when } \{p : \lambda x.p'\} \\
\mathrm{step}^{\#}(t^{\#}, p) \triangleq\ & [p_1 \mapsto (t^{\#}(p).1, \bot)] && \text{when } \{p : p_1\, p_2\} \\
\sqcup\ & [p_2 \mapsto (t^{\#}(p).1, \bot)] && \\
\sqcup\ & \bigsqcup_{\langle \lambda x.p', p'' \rangle \in t^{\#}(p_1).2.2} [p' \mapsto (t^{\#}(p'').1 \sqcup ([x \mapsto \{p_2\}], \emptyset), \bot)] && \\
\sqcup\ & [p \mapsto \bigsqcup_{\langle \lambda x.p', \_ \rangle \in t^{\#}(p_1).2.2} (\bot, t^{\#}(p').2)] && \\
\sqcup\ & [p \mapsto (\bot, (([], \{\mathsf{Call}^{\#}(p_1, p_2)\}), \emptyset))] && \text{if } t^{\#}(p_1).2.1.2 \neq \emptyset \\

\end{aligned}
$$

The abstract semantics $t^{\#}$ computed by

$$[\![p_0]\!]^{\#}(\sigma_0^{\#}, t_0^{\#}) \triangleq \mathrm{lfp}(\lambda t^{\#}.\mathrm{Step}^{\#}(t^{\#}) \sqcup t_{\mathrm{init}}^{\#}) \quad \text{where } t_{\mathrm{init}} = t_0^{\#} \sqcup [p_0 \mapsto (\sigma_0^{\#}, \bot)]$$

is a sound abstraction of $[\![p_0]\!]\Sigma_0$ when $\Sigma_0 \subseteq \gamma(\sigma_0^{\#}, t_0^{\#})$.

3.3 Abstract linking

Now we define a sound linking operator that abstracts $\rtimes$. Assume we have

$$\sigma_0 \le (\sigma_0^\#, t_0^\#) \quad t \subseteq \gamma(t^\#)$$

we define:

$$\sigma_0 \rtimes t \triangleq \lambda p. \bigcup_{\sigma \in t(p)} (\sigma_0 \rtimes \sigma) \cup \bigcup_{(\sigma,v) \in t(p)} \{(\sigma_+, v_+) | \sigma_+ \in \sigma_0 \rtimes \sigma \text{ and } v_+ \in \sigma_0 \rtimes v\}$$

We want to define $\rtimes^\#$ so that the following holds:

$$\sigma_0 \rtimes t \subseteq \gamma((\sigma_0^\#, t_0^\#) \rtimes^\# t^\#)$$

This is equivalent to saying that the linked result $t_+^\# = (\sigma_0^\#, t_0^\#) \rtimes^\# t^\#$ satisfies:

$$\sigma_0 \le (\sigma_0^\#, t_0^\#) \text{ and } w \le (v^\#, t^\#) \Rightarrow w_+ \le (v_+^\#, t_+^\#)$$

for each $w_+ \in \sigma_0 \rtimes w$ and $p \in \mathbb{P}$, where $[v^\#, v_+^\#] \in \{[(t^\#(p).1, \emptyset), (t_+^\#(p).1, \emptyset)], [t^\#(p).2, t_+^\#(p).2]\}$.

The condition for $t_+^\#$ can be deduced by attempting the proof of the above in advance.

We proceed by induction on the derivation for

$$w_+ \in \sigma_0 \rtimes w$$

and inversion on $w \le (v^\#, t^\#)$.

When:	$w = \mathsf{Init}$,	
Have:	$\mathsf{Init}^\# \in v^\#.1.2$	
Need:	$v_+^\# \sqsupseteq \sigma_0^\#$	
	$t_+^\# \sqsupseteq t_0^\#$	
When:	$w = \mathsf{Read}(E, x)$,	
Have:	$\mathsf{Read}^\#(p', x) \in v^\#.1.2$ and $[E] \le t^\#(p').1$	
Need:	$v_+^\# \sqsupseteq t_+^\#(p'').2$	for $p'' \in t_+^\#(p').1.1(x)$
	$v_+^\# \sqsupseteq (([], \{\mathsf{Read}^\#(p', x)\}), \emptyset)$	if $t_+^\#(p').1.2 \ne \emptyset$
When:	$w = \mathsf{Call}(E, v)$,	
Have:	$\mathsf{Call}^\#(p_1, p_2) \in v^\#.1.2$ and $E \le t^\#(p_1).2$ and $v \le t^\#(p_2).2$	
Need:	$v_+^\# \sqsupseteq t_+^\#(p').2$	for $\langle \lambda x.p', p'' \rangle \in t_+^\#(p_1).2.2$
	$v_+^\# \sqsupseteq (([], \{\mathsf{Call}^\#(p_1, p_2)\}), \emptyset)$	if $t_+^\#(p_1).2.1.2 \ne \emptyset$
	$t_+^\#(p') \sqsupseteq (t_+^\#(p'').1 \sqcup ([x \mapsto \{p_2\}], \emptyset), \emptyset)$	for $\langle \lambda x.p', p'' \rangle \in t_+^\#(p_1).2.2$
	$t_+^\# \sqsupseteq \mathsf{Step}^\#(t_+^\#)$	
When:	$w = (x, \ell^{p'}) :: \sigma$,	
Have:	$p' \in v^\#.1.1(x)$ and $\sigma \le v^\#$	
Need:	$v_+^\#.1.1(x) \ni p'$	
When:	$w = (x, w') :: \sigma$,	
Have:	$p' \in v^\#.1.1(x)$ and $w' \in t^\#(p').1$ and $\sigma \le v^\#$	
Need:	$v_+^\#.1.1(x) \ni p'$	
When:	$w = \langle \lambda x.p', \sigma \rangle$,	
Have:	$\langle \lambda x.p', p'' \rangle \in v^\#.2$ and $\sigma \le t^\#(p'').1$	
Need:	$v_+^\#.2 \ni \langle \lambda x.p', p'' \rangle$	

The above conditions can be summarized by saying $t_+^\#$ is a post-fixed point of:

$$\lambda t_+^\#. \mathsf{Step}^\#(t_+^\#) \sqcup \mathsf{Link}^\#(\sigma_0^\#, t^\#, t_+^\#) \sqcup t_0^\#$$

where $\mathsf{Link}^\#(\sigma_0^\#, t^\#, t_+^\#)$ is the least function that satisfies:

Let $\text{link}^{\#} = \text{Link}^{\#}(\sigma_0^{\#}, t^{\#}, t_+^{\#})$ in		
For each $p \in \mathbb{P}$, when $v^{\#}, v_+^{\#} = (t^{\#}(p).1, \emptyset), (\text{link}^{\#}(p).1, \emptyset)$		
or when $v^{\#}, v_+^{\#} = t^{\#}(p).2, \text{link}^{\#}.2$		

If:	$\text{Init}^{\#} \in v^{\#}.1.2$	
Then:	$v_+^{\#} \sqsupseteq \sigma_0^{\#}$	
If:	$\text{Read}^{\#}(p', x) \in v^{\#}.1.2$	
Then:	$v_+^{\#} \sqsupseteq t_+^{\#}(p'').2$	for $p'' \in t_+^{\#}(p').1.1(x)$
	$v_+^{\#} \sqsupseteq (([], \{\text{Read}^{\#}(p', x)\}), \emptyset)$	if $t_+^{\#}(p').1.2 \neq \emptyset$
If:	$\text{Call}^{\#}(p_1, p_2) \in v^{\#}.1.2$	
Then:	$v_+^{\#} \sqsupseteq t_+^{\#}(p').2$	for $\langle \lambda x.p', p'' \rangle \in t_+^{\#}(p_1).2.2$
	$v_+^{\#} \sqsupseteq (([], \{\text{Call}^{\#}(p_1, p_2)\}), \emptyset)$	if $t_+^{\#}(p_1).2.1.2 \neq \emptyset$
	$\text{link}^{\#}(p') \sqsupseteq (t_+^{\#}(p'').1 \sqcup ([x \mapsto \{p_2\}], \emptyset), \emptyset)$	for $\langle \lambda x.p', p'' \rangle \in t_+^{\#}(p_1).2.2$
If:	$p' \in v^{\#}.1.1(x)$	
Then:	$v_+^{\#}.1.1(x) \ni p'$	
If:	$p' \in v^{\#}.1.1(x)$	
Then:	$v_+^{\#}.1.1(x) \ni p'$	
If:	$\langle \lambda x.p', p'' \rangle \in v^{\#}.2$	
Then:	$v_+^{\#}.2 \ni \langle \lambda x.p', p'' \rangle$	

Note that the left-hand side contains only $\text{link}^{\#}$ and the right-hand side does not depend on the value of $\text{link}^{\#}$. Some auxiliary lemmas:

Lemma 3.1 (Substitution of values)**.**

$$w \leq (v^{\#}, t^{\#}) \text{ and } u \leq (t^{\#}(p).2, t^{\#}) \Rightarrow w[u/\ell^p] \leq (v^{\#}, t^{\#})$$

Lemma 3.2 (Sound $\text{step}^{\#}$)**.**

$$\forall p, t, t^{\#} : t \subseteq \gamma(t^{\#}) \Rightarrow \text{step}(t, p) \cup t \subseteq \gamma(\text{step}^{\#}(t^{\#}, p) \sqcup t^{\#})$$

Lemma 3.3 (Sound $\text{Step}^{\#}$)**.**

$$\forall t_{\text{init}}, t^{\#} : t_{\text{init}} \subseteq \gamma(t^{\#}) \text{ and } \text{Step}^{\#}(t^{\#}) \sqsubseteq t^{\#} \Rightarrow \text{lfp}(\lambda t.\text{Step}(t) \cup t_{\text{init}}) \subseteq \gamma(t^{\#})$$
